Re: Recyclability Testing

To whom it may concern,

We conducted recyclability testing on Versalite™ material for Berry Plastics in November 2012. The test results demonstrate that Versalite™ material behaves just like standard polypropylene (PP) in the post-consumer PP recycling stream. Based on its processability, physical testing results, analytical testing results and our experience as the world's largest plastics recycler, it is our opinion that Versalite™ is just as recyclable as standard polypropylene (PP) and will not negatively impact the post-consumer PP recycling stream.

J. Scott Saunders  
General Manager  
KW Plastics, Recycling Division
